

BICYCLE SHIFT CONTROL DEVICE THAT INHIBITS THE  
GENERATION OF A SECOND SHIFT SIGNAL AFTER THE  
GENERATION OF A FIRST SHIFT SIGNAL

ABSTRACT OF THE DISCLOSURE

A bicycle shift control device includes a shift signal output unit for outputting shift signals and an inhibiting unit operatively coupled to the shift signal output unit for inhibiting the output of a second shift signal after the output of a first shift signal. In a more specific embodiment, the inhibiting unit inhibits the output of the second shift signal for a predetermined standby time after the output of the first shift signal.
